

Amendments to the Abstract:

Please replace the Abstract with the following amended Abstract:

A connector for connecting to an end of a corrugated conduit. An infitting section can be inserted into the end of a corrugated conduit and has at least one conical section which is provided with a ramp surface that slopes upward in the insertion direction, pointing away from the infitting end. A clamp is spaced radially apart from the infitting section and includes at least one engaging nose which can be inserted between two elevations of the corrugated conduit.
